

## BAR READER

Model : Bar Reader - BR10

“Bar readers, also known as bar magnifiers or line magnifiers, are specialized low vision aids designed to assist individuals with visual impairments in reading. These devices feature a long, narrow magnifying lens that is placed over text, magnifying one line at a time. With a small window or aperture to isolate the line being read, bar readers reduce distractions and make reading more manageable for those with conditions like macular degeneration or central vision impairments. By moving the bar reader horizontally across the text, users can read one line at a time, improving accessibility and independence in reading tasks. Available in various sizes and magnification powers, bar readers are a valuable tool for individuals with low vision.”

### Common uses of bar reader low vision aids

- Assists individuals with low vision, particularly those with conditions like macular degeneration or central vision impairments.
- Helps individuals read text more easily by magnifying one line at a time.
- Reduces distractions from surrounding text by using a small window or aperture to isolate the line being read.
- Improves accessibility and independence in reading tasks.
- Enables individuals to read books, newspapers, magazines, and other printed materials.
- Useful for reading labels, prescription bottles, and other small print.
- Can be used in educational settings for students with low vision.
- Provides a portable and convenient solution for reading on the go.
- Available in various sizes and magnification powers to suit individual needs.
- Complements other low vision aids and assistive technologies for a comprehensive visual rehabilitation approach.
